-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2656

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Glushko et al (6992965).

The reference shows an optical scanning apparatus comprising: disk having a plurality of data layers 1, L1-Ln, a light source 4, an objective lens 18, and a photo detector 8 wherein the light beam numerical aperture is smaller than the objective lens numerical aperture as shown by the wavelength entering through element 14A and the numerical aperture of the objective lens 18.

With respect to the limitation of claim 2. the use of an objective lens with a numerical aperture ranging from 0.5 to 1.0 is merely a standard to read an optical disk (CD or DVD). The reference in column 8 line 49 discloses the use of an objective lens ranging between 0.6-0.7.

With respect to the limitation of claim 3 see column 8 line 46 disclosing the use of an aperture within element 14 ranging between 0.2-0.4.

With respect to the limitations of claims 4-6. The reference shows the use of a dichroic mirror having an aperture to reduce the light beam aperture as shown by element 14.

With respect to the limitation of claim 7-see element 16.

Art Unit: 2656

With respect to the limitation of claim 8. the reference in element 14 having the light beam of wavelength 1 being expanded with respect to the light beam wavelength zero.

Thus the limitation beam expander is present within the element.
